Clinical Visit Note

Northgate Spine and Pain

Patient: Mei Bianchi
DOB: 05/06/1963
Date of visit: October 5, 2026
Attending: Dr. Leah Kowalski

Assessment and plan

Transforaminal epidural steroid injection at L4-L5 performed under fluoroscopic guidance for low back pain that began two weeks ago after lifting a box. Pain is confined to the lower back and there are no leg symptoms. No imaging has been performed. The patient has not tried physical therapy or anti-inflammatory medication.
